General View

1

Registration

- 1. When you install WTS APK, you will see screen below for the first time.
- 2. When you click on Continue button, you will view a new screen where you should enter Installation code as well as URL to connect to WTS web application.
- 3. To find Installation code, you need to open WTS web application and go to Admin Section, where you click on Devices link. By clicking on "Print Install Sheet (PDF)" button at the bottom of the page, you will open a new document where you will find installation code and its barcode equivalent.

You have 3 options for communication:

- Auto
- HTTP
- HTTPS
- **4.** When you click on Register button, a message will confirm that registration has been successful. By closing the confirmation message, you will be redirected to Login page.

Sign into Mobile App

1. You need to enter your username and password to sign in to mobile application.

Sign Out

- 1. To sign out of WTS App, you should open main menu and click on Logout button.
- A message will be displayed to confirm your request. When you click on YES, you will be logged out of application.

If you quit application without launching Sync process, you will not see data entries made after last sync in WTS web application. But do not worry, you will not lose your data. Next time that you sign in to WTS App, Sync process will be executed automatically and all data entries will be sent to central server.

Main Page

When you first sign into WTS App, you will see the screen below where you have number of received, delivered and modified packages that ARE NOT YET synchronized with the central server. Last sync date indicates the last time that synchronization process has been launched.

When you perform an action inside WTS App, modifications will NOT be communicated to the server automatically. You need to launch Sync process in order to send all changes back to server.

If you click on WTS icon at the bottom of the page, administration page will be displayed where you can modify general settings for WTS App.

Main Menu

If you click on the box inside the circle at the top-right corner of the screen, main menu will be displayed where you can receive, deliver and modify packages as well as view list of packages on a given route.

Track your first Package

English

1

Sync Data with Server

Needless to say that you need internet connection in order for Sync process to communicate with central server. During Sync process, your latest data entries will be sent to the server. You will also receive all updates on reference data as well as all packages that have been recently added/modified in the system by your colleagues.

2-Receive a New Package

| 2.1. Verify a Package - quick record a package | 6 |
|--|----|
| 2.2. Receive a Package - assign a package to a recipient | 10 |
| 2.3. Receive Multiple Packages for the same recipient with Multi-Receive | 15 |
| 2.4. Go Back | 19 |

You have 3 options to record packages in the system.

Verify allows you to quickly confirm package's arrival to your organization without having to enter information about its final recipient and its final destination.

In **Receive** page, you can enter information such as its recipient, final destination, mailbox number, etc in the system.

With **Multi-receive**, multiple packages can be recorded for a single recipient.

Verify a Package - quick record a package

Go to Help for Verifying a package on Web Application

Imagine this scenario:

Carrier's delivery agent arrives with a pile of new packages for your company. Mailroom staff is very busy and does not have enough time to enter information for each package, he scans packages quickly to keep a trace of them, then will free carrier's delivery agent. By scanning each package, he verifies barcode number for the package against the transporter list. Later when he has time, he will complete information such as final recipient name, location for each package

| | | | ՝ 🗧 🤍 📉 🖬 16:06 |

list.

If user taps on a package number in this list, he can view information about this

Please make sure to tap on Verify button before leaving this screen in order to pass these packages on verified status. Verify button works like a confirmation button, so if you do not click on it before leaving the page, scanned packages will not be stored in device's database.

By clicking on Verify button, you will leave this page and a notification will appear to confirm that packages were stored successfully in the system.

Verified packages will be sent to central server when you press on Sync button in main menu or the next time that you launch WTS App.

Receive a Package - assign a package to a recipient

Go to Help for receiving a package on Web Application

You can enter information for a package that you have verified before or a package for which no information exists in the system. By receiving a package, you need to complete necessary details needed to deliver a package to its final recipient.

As you can guess, Recipient name and location as well as package's tracking number are mandatory information to be entered in this screen.

1. You can scan tracking number or enter it manually.

| I N | * 🔿 💎 🖹 🖬 16:06 |

Receive Multiple Packages for the same recipient with Multi-Receive

Go to Help for receiving multiple packages in Web Application

If user needs to record multiple packages for the same recipients, he can choose Multi-Receive screen, where he chooses a recipient, then scans multiple packages for selected recipient.

When he enters 3 first characters of recipient name, an automatic search will be launched and he will see a list of all possible choices. When he selects a recipient in this list, his location will be set automatically. If this location is already on more than one route, user will be asked to choose a route in the list. 1. When user is done entering information for recipient, he will tap on Scan button at bottom-right corner of the screen, to start entering tracking number of his packages.

| | * 🗢 マ 🖹 🖻 11:24 |

Details

Scan

3. After tapping on Submit button, user will leave Multi-Receive screen and return to main screen on WTS App. A notification will be displayed at the bottom of the screen for few seconds to confirm that packages have been successfully added to the mobile database.

You will notice in image below that number of received packages is updated to 4 packages. Number of received/modified/delivered packages on main screen presents number of packages that have not been sent to central server. User who had received 20 packages during the day and had launched Sync process several times, will only see number of packages that are not yet sent to central server.

Go Back

1. User comes back to main menu by tapping on Go Back menu.

3-Change Package Tracking Status using Actions

Go to Help for using Action in Web Application

From the time a mailroom agent receives a package till when package is delivered to its final recipient, package might take different statuses. For example, it might be stored temporarily in a storage area, it might be loaded into a parcel locker, a reminder might be sent to final recipient, etc.

On this screen, user executes actions in order to change package's tracking status.

1. Tapping on this menu, a list of available actions on mobile device will be displayed. User chooses his desired action and he will be redirected to a new screen where he scans tracking numbers (or enters them manually).

3

- Out for Delivery
- Received
- Stored
- Stored at Campus
- Delivered by Agent
- Pick up by end customer
- Collected return parcel
- Collected expired parcel
- Collected rerouting parcel

Example: Out for Delivery

2. Let's say that delivery agent is about to leave to deliver package(s) to final recipient so he wants to pass his packages' status to Out for Delivery.

First he chooses Out for Delivery in the list. Then he scans tracking numbers (or enters them manually).

| | * 🗢 マ 🖹 🖬 11:27 |
|-------------------|-----------------|
| ← Out for Deliver | у 💮 |
| Scan: | |
| | |
| Subr | nit |
| Tracking number | |
| Carrier | lbs |

3 English

3. When he has entered all tracking numbers, he taps on Submit button to update this modification on package tracking status.

| ■ N * ⊖ 💎 | 11:27 |

| ZZ20181025002 | |
| Other | 0.0 |
| ZZ20181025001 | |
| Other | 0.0 |

4. System administrator can configure a tracking status to require a signature before changing to that status. If this is the case (for example, delivered status), you will be asked to sign on the screen. If not, then a message will ask you to confirm your choice.

5. When status change is completed, a notification will be displayed for few seconds to confirm that status change has been saved in mobile database. In Main page, you will see number of modified packages has changed. Now, if you click on Sync menu, modified packages will be sent to central server and number of modified packages will be zero again at the end of Sync process.

4-Deliver Packages

Go to Help for delivering a package in Web Application

 In order to deliver a package, you should first tap on deliver in main menu. On Delivery screen, you can scan tracking numbers (or enter them manually) for all packages that you wish to deliver. Please note that in this screen it is only possible to deliver at the same the packages that belong to the same final recipient, as when you tap on Submit button, recipient will be asked to sign for his package(s).

| <u> </u> | / |

| Other | 0.0 |
| ZZ20181025011 | |
| Other | 0.0 |

2. If you tap on a tracking number in this list, you can view information about the package.

4 English

4. A notification will be displayed for few seconds to inform you that package status is set to delivered now. You will notice on main menu, that number of delivered packages on main page has changed. This number presents number of delivered packages that have not been synced to central server yet. As soon as you launch Sync process, this number will be reset to zero again.

5-Modify a Package

| 5.1. | Modify | 2 |
|------|----------------|----|
| 5.2. | Scan to Modify | 5 |
| 5.3. | Group Modify | 57 |

Modify

1. If you need to change any data about only one package (except its tracking number), you can use Modify screen.

| Other | 0.0 |

6. To deliver packages in this list to the SAME RECIPIENT, you press on Submit button. In the next screen, first you choose recipient and his location, then he signs to collect his packages.6

6

7. When you click on Submit button, modifications will be saved in mobile database. A notification will be displayed to confirm this action. As you see in image below, packages are delivered and there are no more undelivered packages for City1 location.

 \bigcirc

Please make sure to launch Sync process to send latest modifications to central server.

7-Search Packages

| 7.1. Search for packages | 49 |
|--------------------------|----|
| 7.2. Group Deliver | 52 |
| 7.3. Group Modify | 58 |

Search for packages

1. Let's say that you need to perform an action (either Modify or Deliver) on one or multiple packages at the same time.

| • • | - | N Se | arch | 1 | | | * • | : | | B 1 | 1:32 |
|--------|-------------|--------------------|---------------------------|------------------------|----------|-----|-----|-----|-----|------|------|

Client Settings

In Client Settings page, you can change web address to which WTS App connects to. When you press on Set Server button, you will be redirected to Initialization screen where you will be asked to enter Installation Key as well as web address to WTS web services. Please note that once you pressed on this button, you have to re-enter installation key and correct WTS web address or you would not be able

| | | Set Server | |
|-------------------------------|------|------------|------|
| to sign in to WTS mobile App. | Data | Client | Sync |

Sync Settings

On Sync page, you can set the synchronization process.

Adjust event times to server time: Better not to select this option, if you are located in a time-zone different from central server's time zone. This option will force to event times to be recorded in server time instead of local time.

Let's say that you are using handheld devices in Paris (GMT+2) and servers are hosted in Dublin (GMT+1). If you select this option, all events will be recorded on Dublin time, which might not be suitable for your needs.

Auto Sync: If needed, you configure your WTS App to synchronize automatically with central server after a defined interval has

General App Settings

In General page, more parameters can be set.

Use portrait mode for delivery signing: By default, when delivering a package, signature capture screen is displayed in landscape mode. You can choose to display signature capture screen in portrait mode, if you select this option. Always display internal tracking number for routing: By default, if there is already a tracking number specified for the package, then it will be displayed. If there is no tracking number specified for the package, WTS internally generated will be shown. Note WTS always assigns an internal tracking number to all packages. If you choose this option, WTS internal tracking number will be displayed instead of package's tracking number, even if a tracking number for the package exists. Prompt user when scanning a package for a different route location: Delivery agent will receive a message that asks him to confirm that he is about to deliver a package to a different location other than the one that has been
